|  <p><b>SIMPSON</b><br/><b>Strong-Tie</b></p> <p>Simpson Strong-Tie<br/>Phone: 800-999-5099<br/>Web: <a href="http://www.strongtie.com">www.strongtie.com</a></p> | A unique composite of steel and wood, Simpson Strong-Tie's Steel Strong-Wall® features loads that are between two and three times higher than the original wood Strong-Wall. The ICC-approved wall is available in five widths and various heights to offer increased design flexibility. A new two-story solution will be available in late April.   |              | X          |                        |                 |                       |                          |          |           |         |  |
|  | Simpson Strong-Tie's new ITS top flange I-joist hanger features a new Strong-Grip™ seat that securely holds the I-joist without any joist nails while providing more than 100 pounds of rated uplift resistance. Once the hanger is installed on the header, the I-joist is simply snapped down into place.   |              | X          |                        |                 |                       |                          |          |           |         |  |
|  | Simpson Strong-Tie's new SDS Screw features a 4CUT™ tip that virtually eliminates wood from splitting during installation. The new design also reduces installation torque. The screw comes with a new double-barrier coating that has corrosion-resistant properties superior to hot-dip galvanization. SDS screws can be specified for interior, exterior and pressure-treated wood applications. |              | X          |                        |                 |                       |                          |          |           |         |  |
